

Ministry Area Profiles & Community Insight Reports

Any city, any county, any campus in the United States — a sourced portrait, delivered quickly.

Publicly accessible federal, academic and national research data — merged on demand into one current portrait of any place

You name the place — **anywhere in the country**. You receive a fifteen-to-twenty page profile of the people who actually live there: who they are, what they carry, where they stand spiritually, and what all of it means for a church or nonprofit hoping to serve them. The data infrastructure behind these reports is national, so coverage is never the constraint. Every figure is **sourced and dated**; every interpretation is **labeled as interpretation**.

WHAT YOU GIVE ME

01 The geography

Any U.S. city, neighborhood, ZIP cluster or county — or any college campus.

02 Your ministry context

Planting, partnership, revitalization, outreach, or campus work.

03 What you already know

Your read on the place, so the report answers your real questions.

Roughly a ten-minute conversation. Everything after that is on me — and it comes back fast.

WHAT COMES BACK TO YOU — EVERY REPORT, EVERY TIME

1 How to Read This Report

Findings vs. considerations, stated up front.

2 The Community at a Glance

Snapshot table set against county and state.

3 Population, Age & Households

Growth or decline, age bands, family structure.

4 Economic Profile

Income, poverty, rent burden, home values, work.

5 Race, Diversity & Neighbors

Composition, and how hardship falls along it.

6 The Faith & Religious Landscape

Adherence rates, largest bodies, the unclaimed majority.

7 Psychographic & Lifestyle Segments

The kinds of neighbors you will actually meet.

8 Community Needs & Quality of Life

Where the place hurts — and where it is strong.

9 Implications for Ministry

What this specific field asks of a church.

10 Executive Summary — Top 10

The one page to hand a board or a partner.

11 Sources, Method & Caveats

Every number traceable; every limit disclosed.

WHY CHURCHES AND BOARDS USE IT

Anywhere in the United States

Every county, city, town and neighborhood in the country — and every college and university campus in it. The federal and national data sets these reports are built on cover all of them, so the answer to “**can you do our place?**” is yes.

Quickly, and in one piece

The sourcing, the structure and the analysis are already built. What takes a committee months of arguing over which numbers to trust comes back as a single finished document, ready for the next board meeting rather than the one after it.

Data you can defend

Findings are separated from interpretation, ranges replace false precision where sources disagree, and every source and survey year is listed. When a funder or a denominational committee asks where a number came from, you have an answer.

ALSO AVAILABLE · CAMPUS MISSION-FIELD PROFILES, ANY U.S. INSTITUTION

The same report, built for a campus instead of a city — flagship, regional, community college or private: enrollment trends, Pell share and financial fragility, retention against six-year completion, commuter versus residential rhythms, the ministries already on campus, and national student-wellbeing data. Same price.

INVESTMENT

\$100

per report, any U.S. geography or campus
